

Managing sewer networks and decision making systems.

11 October '05 - WRc, Swindon

Sewers are at last getting some attention. The regulatory focus on sewer blockages, CSO monitoring and the need for hard data for periodic reviews has prompted some serious effort at sewer monitoring. However, there is still a big gap between the data we can afford to get and generating the information we would like to have for effective operational and asset management. This workshop will mark the progress being made and explore some of the ways in which the data we can get can be used creatively to meet the need for pro-active management of this high value asset.

Chair; Dene Marshallsay, WRc
