

Odour Measurement & Control

10 June 2020

Webinar

Odour from waste-water treatment works is a perennial problem particularly for those sites with houses nearby. The water companies are being driven by the Ofwat service incentive mechanism to reduce adverse incoming contacts from customers, or face a reduction in their "Ofwat score". At the same time, if enough people complain to Environmental Health, they can serve a statutory nuisance abatement notice which can severely limit how a site is operated. Abatement notices are to be avoided as once served they are with the site for ever! As a consequence, this workshop on the measurement and management of odour will be of interest to decision- makers, engineers and scientists from utilities and equipment manufacturers.

Chair: Jim Grandison, Thames Water

13:00 Introduction by the Chairman.

13:10 London's CSO control improvement programme- Air management challenges, **Sofia Georgaki, Thames Tideway**

13:35 Regulation of odour in the water industry, **Nick Sauer, Environment Agency**

14:00 Odour sensor. **Tristen Preger, ATi**

14:25 Odour and/or H2S Monitoring Technologies. **Peter Holbrow, Pollution Monitors**

14:50 Identifying the source of odour issues to achieve positive outcomes in real-time?
Gary Logan, Envirosuite

15:15 Discussion & close

REGISTRATION: Thanks to sponsorship from ATi we are able to offer SWIG members free registration for this webinar, non members will be charged £60 inc VAT. Registrations can be made by Tel 01934 830658 or by email to rosa.richards@swig.org.uk or using the on-line booking form. **Please advise of any special dietary requirements at time of booking.**

Cancellation policy: Refunds can only be made if cancellations are notified at least 5 days in advance of the Workshop date.
